

Science

Science teaching and learning in our school is good when...

We are engaged and eager to learn. We develop our scientific knowledge and skills.

Science is memorable because it is exciting, interesting, and fun.

We are curious and ask questions that inspire others.

We talk about our discoveries and what we would like to find out.

Learning is practical and hands-on. We learn outdoors, through investigations, experiments, research, visitors, observations, and trips.

Science is relevant and links to the real world are made.
